

BMSF

Bezel Fitting Instructions

The BMSF is a stainless steel flush bezel for the BM2/4/8 and BMNET EVCS Master Stations, and provides a professional finish.

The front of the Master Station should protrude by 10mm to allow the doors to open fully in operation.

The cut out for the panel should be as shown above, taking care to pack the depth to a maximum of 85mm.

Once the panel is mounted, the bezel should be fixed in place using either double sided tape, bathroom sealer or mastic
